# INTERNATIONAL PETROLEUM STATISTICS REPORT

**June 1996** 

**Energy Information Administration Energy Markets and Contingency Information Division** 

### **Preface**

The <u>International Petroleum Statistics Report</u> is a monthly publication that provides current international oil data. This report is published for the use of Members of Congress, Federal agencies, State agencies, industry, and the general public. Publication of this report is in keeping with responsibilities given the Energy Information Administration in Public Law 95-91 (Section 205(a)(2)) that states:

"The Administrator shall be responsible for carrying out a central, comprehensive, and unified energy data and information program which will collect, evaluate, assemble, analyze and disseminate data and information ..."

The International Petroleum Statistics Report presents data on international oil production, demand, imports, exports, and stocks. The report has four sections. Section 1 contains time series data on world oil production, and on oil demand and stocks in the Organization for Economic Cooperation and Development (OECD). This section contains annual data beginning in 1985, and monthly data for the most recent two years. Section 2 presents an oil supply/demand balance for the world. This balance is presented in quarterly intervals for the most recent two years. Section 3 presents data on oil imports by OECD countries. This section contains annual data for the most recent year, quarterly data for the most recent two quarters, and monthly data for the most recent twelve months. Section 4 presents annual time series data on world oil production and oil stocks, demand, and trade in OECD countries. World oil production and OECD demand data are for the years 1970 through 1995; OECD stocks from 1973 through 1995; and OECD trade from 1984 through 1994.

Data for the United States are developed by the Energy Information Administration's (EIA) Office of Oil and Gas. Data for other countries are derived largely from published sources, including International Energy Agency publications, the EIA International Energy Annual, and the trade press. (See sources after each section.) All data are reviewed by the International Statistics Branch of EIA. All data have been converted to units of measurement familiar to the American public. Definitions of oil production and consumption are consistent with other EIA publications.

General information about this publication may be obtained from W. Calvin Kilgore, Director, Office of Energy Markets and End Use, (202) 586-1617, and from Mark E. Rodekohr, Director, Energy Markets and Contingency Information Division, (202) 586-1130. Detailed questions and comments concerning the contents of the International Petroleum Statistics Report may be directed to Louis D. DeMouy, Chief, International Statistics Branch, (202) 586-6557; Michael J. Maloney (202) 586-9415, Patricia A. Smith (202) 586-6925, H. Vicky McLaine (202) 586-9412 or to Michael J. Grillot (202) 586-6577; Oil Market Chronology - Lowell Feld (202) 586-9502.

#### NOTE

Revisions reflect changes to data that are now available on the EIA Home Page (http://www.eia.doe.gov/emeu/world/main1.html).

### Oil Market Chronology -- May 1996

The following chronology lists international events of potential significance for world petroleum markets. Sources include: Dow Jones (DJ), Financial Times (FT), Oil and Gas Journal (OGJ), Platt's Oilgram News (PON), and the Wall Street Journal (WSJ).

- April 29 In Congo, the government announces that bidding documents will be issued shortly for the privatization of Hydrocarbures de Congo (Hydro-Congo) and Congolaise de Rafinage (CORAF). Although Hydro-Congo was previously active in upstream exploration and production, its activities recently were limited by a lack of financial resources to the distribution of petroleum products. CORAF is the state-owned refining company. The privatizations are expected to spur foreign investment in the country's ailing downstream sector and allow for adequate processing of increased domestic oil output. In 1995, Congo produced about 175,000 barrels per day. Oil production is expected to rise to around 260,000 barrels per day by 1998 after Elf's N'Kossa and Agip's Kitina fields come online. (DJ)
- Bolivian President Gonzalo Sanchez de Lozada signs a new hydrocarbon law allowing for the privatization of state-owned Yacimientos Petroliferos de Fomento Boliviano (YPFB). YPFB is one of six large state-owned companies which are undergoing privatization. Fifty-two foreign companies have pre-qualified to bid for YPFB's exploration, transportation, and product marketing operations. YPFB will retain control of three domestic oil refineries and all domestic pipelines. Bolivia currently is involved in a \$1.5-billion export pipeline project to carry natural gas to Brazil. A number of foreign companies, including Enron and Tenneco, are building the privately-financed line. (DJ, WSJ)
- May 3 Following French diplomatic initiatives, Yemen and Eritrea agree to form an arbitration panel to solve their territorial dispute over three islands located 100 miles north of the Red Sea's Bab al-Mandab Strait. In December 1995, the two countries fought briefly over control of Greater Hanish Island, resulting in twelve deaths. Eritrea now controls Greater Hanish Island, while Yemeni forces hold Lesser Hanish and Zugar Islands. All of the islands lie astride major oil shipping routes as well as near offshore oil exploration acreage held by foreign companies, including Houston-based Anadarko Petroleum. (DJ)
- May 4 Eight hundred Norwegian oil workers stage a strike in sympathy with a similar month-long action by a construction workers' union demanding revised contract laws. The strike by the Federation of Trade Unions of Oil Workers' (OFS) cuts 1 million barrels per day of oil production from the 190,000-barrel-per-day Statfjord B, 320,000-barrel-per-day Statfjord C, 150,000-barrel-per-day Gullfaks A, 150,000-barrel-per-day Gullfaks C, and the smaller Ula, Heimdal, and Oseberg C fields. The shut-in amounts to about one-third of Norway's oil output. Subsequently, Statoil, a major Norwegian oil company, declares *force majeure* on one cargo of crude oil deliveries. The strike ends after six-days due to lack of unanimity among OFS members. (DJ, PON)
- May 10 In Vietnam, Royal Dutch/Shell relinquishes its Block 10 concession in the Nam Con Son basin off the country's southeastern coast. Shell makes the decision after drilling four unsuccessful exploration wells on the acreage, which was long-thought to hold promising potential. The move is made amidst the Vietnamese government's rejection of Australia-based BHP's efforts to renegotiate the terms for its Dai Hung oil field in Block 5-1. BHP sought a revised contract after appraisal drilling reduced Dai Hung's estimated reserves from 500 million to 200 million barrels. Due to unexpectedly complex geology, Dai Hung's production since its October 1994 start-up has fallen from 35,000 barrels per day to 12,000 barrels per day. (FT)
- May 11 The Vietnamese government states its intention to build a second 120,000-barrel-per-day refinery in Thanh Hoa province, roughly 75 miles south of Hanoi. Vietnam is planning to build its first 120,000-barrel-per-day refinery at Dung Quat on the country's central coast. Foreign companies such as France-based Total have criticized the government's decision to build the two new refineries far away from the country's crude oil reserves and main product markets in the south. A consortium including Conoco is developing plans to build the first refinery, which could become operational by 2000. The government hopes to finish the second refinery by 2002. (DJ)

- May 11 Kazakstan and Iran sign an agreement in which Kazakstan will ship up to 80,000 barrels per day of crude oil from the Tengiz oil field in exchange for a comparable amount of Iranian crude oil supplied at the Kharg Island oil terminal in the Persian Gulf. It is unknown how U.S. sanctions against Iran will impact on the agreement, which involves U.S.-based Chevron. In March 1996, output at the Chevron-operated Tengiz field reached 100,000 barrels per day, up dramatically from the 50,000-60,000 barrels per day which the field had been limited to prior to a recent export pipeline agreement with Russia. Production is slated to reach 130,000 barrels per day by the end of 1996. Peak output from the 6-billion barrel field could reach more than 700,000 barrels per day by 2010. (DJ)
- May 14 The Peruvian government and a Shell/Mobil consortium sign a \$2.8-billion deal to develop the Camisea natural gas field. The Camisea field contains estimated reserves of 11 trillion cubic feet of natural gas and 700 million barrels of condensate. Development will include construction of a 600-megawatt gas-fired power plant and 373 miles of oil and gas pipelines to link the Amazonian field to the coastal capital of Lima. Construction of other gas-fired power stations is possible, as is a link to the proposed gas export pipeline between Bolivia and Brazil. Concurrent with the agreement, a car bomb explodes at a Shell office building in Lima. Maoist Sendero Luminoso rebels opposing foreign involvement in Peru's natural resource development are blamed by the Peruvian government for the attack. (PON, DJ, WSJ)

Iran signs an agreement to acquire a 10 percent stake in the Caspian Sea's Shakh Deniz oil field from Azerbaijan's state-owned oil company SOCAR. However, the Iranian share will be taken by OEIC, a 60 percent privately-owned engineering and construction company, rather than by state-owned National Iranian Oil Company. In April 1996, Russia-based Lukoil purchased from SOCAR a 10 percent stake in Shakh Deniz, which contains up to 700 million barrels of oil and 14 trillion cubic feet of natural gas. The new development consortium now comprises Iran's OEIC (10%), Lukoil (10%), British Petroleum/Statoil (45%), SOCAR (10%), Turkey's TPAO (15%), and Elf Aquitaine (10%). (PON)

- May 15 In offshore Myanmar, U.S.-based ARCO is awarded the block M-7 concession, which lies adjacent to Total's and Unocal's \$1.1-billion Yadana gas field development. The Yadana field contains estimated gas reserves of 5.7 trillion cubic feet. Total and Unocal currently are planning to construct a pipeline to supply 525 million cubic feet per day of Yadana gas to Thailand, starting in 1998. In nearby acreage, a Texaco consortium is negotiating a similar gas sales contract with Thailand for the 1.5-trillion-cubic-foot Yetagun field. (PON)
- May 16 Chevron and state-owned China National Offshore Oil Corporation sign a production sharing contract for promising exploration acreage in the South China Sea. Chevron's Contract Area 63/15 lies south of Hainan Island off the Vietnamese coast. The concession also is adjacent to Arco's large Yacheng 13-1 gas field, which in January 1996, began supplying natural gas to Hong Kong and mainland China via pipeline. (PON, DJ, OGJ)

In Kazakstan, Mobil acquires a \$1.1-billion, 25 percent stake in the Tengiz field development from the Kazak government. Chevron (50%), Mobil (25%), and the Kazak government (25%) are now the parties involved in the project. Chevron has spent almost \$1 billion so far in field development work, which has suffered delays because of difficulties finding a solution to the problem of export routes. Chevron is expected to spend another \$750 million for its share of a new export pipeline, which will run to Russia's Novorossiysk oil terminal on the Black Sea. Mobil's commitment will require an initial investment of \$500 million, with the balance of \$600 million due in installments by 2000. (WSJ, DJ)

In New York, the United Nations (U.N.) and Iraq agree to U.N. Resolution 986, which provides Iraq with the opportunity to sell \$1 billion of oil every 90 days for a 180-day trial period. Under the resolution, proceeds from the sale would be used for humanitarian purposes. The agreement comes following months of negotiations. Iraqi oil exports are expected to begin by the fall of 1996, after a pumping station on the Iraq-Turkey pipeline is repaired and U.N monitoring and aid distribution facilities are put in place. Shortly after the agreement, the White House announces its decision to allow U.S. oil companies to purchase Iraqi oil exports. (FT, PON, WSJ)

May 22 In Cabinda, Front for the Liberation of the Enclave of Cabinda - Armed Forces of Cabinda (FLEC-FAC) rebels fight with Angolan government troops only a week after FLEC-FAC signed a cease-fire agreement with the government. Since 1975, FLEC-FAC's 3,000-man army has fought the Angolan government for the 2,880-square mile Cabinda province, which is located on the coast between Zaire and Congo. Cabinda's offshore oil fields are run primarily by Chevron and account for over half of Angola's 700,000- barrel-per-day oil production. FLEC-FAC's struggle is separate from Jonas Savimbi's UNITA conflict. In 1995, UNITA and the government signed a peace accord and presently are demobilizing their armies. (DJ)

In Equatorial Guinea, Planning Minister Antonio Fernando Nve Ngu states that oil production from Mobil's offshore Zafiro field will begin by August 1996, only 18 months after the field's discovery. A floating production, storage, and offloading vessel will be used in a fast-track development program, which is slated to yield 40,000 barrels per day initially and 80,000 barrels per day by 1998. The Zafiro field is a boon for the country's economy, which is one of the poorest in Africa. (DJ, OGJ)

- May 23 State-owned Petroleum Authority of Thailand (PTT) signs agreements to increase its purchases of gas from foreign-operated Gulf of Thailand gas fields. In the two separate deals, PTT agrees to buy 330 million cubic feet per day of gas from Unocal's 1-trillion-cubic-foot Pailin field by 2001 and 550 million cubic feet per day of gas from Total's 3.3-trillion-cubic-foot Bongkot field by mid-1998. Thailand's domestic gas demand is estimated at 1 billion cubic feet per day and is projected to double over the next five years. To meet its increased requirements, Thailand also is planning to import gas from Malaysia, Myanmar, and Indonesia. (PON)
- Following a May 7 ambush of Nigerian troops by Cameroonian army forces, Nigeria and Cameroon agree to allow a U.N. mission to travel to the disputed Bakassi Peninsula. Clashes between Nigeria and Cameroon have erupted several times on the Peninsula since February 1996. The Bakassi Peninsula is a 600-square mile region bordering the two countries. It contains oil and natural gas reserves and is near Shell production facilities in southeastern Nigeria. Nigeria claims that an 1858 treaty places the Peninsula in its territory. Cameroon contends that Nigeria offered it the region after Cameroon refused to help Biafran rebels during Nigeria's 1967 civil war. More recently, Nigeria has accused Cameroon of siphoning off 130,000 barrels per day of oil from the producing fields in the region. The International Court of Justice in the Hague also is reviewing the case. (DJ)
- May 29 In Vietnam, Unocal signs a contract for the Block B concession off the country's southwestern coast. The move follows Conoco's acquisition last month of offshore acreage claimed by both Vietnam and China. Unocal's latest acquisition is the first by a foreign company in Vietnam's territory in the Gulf of Thailand. The company believes that natural gas may be present in Block B. Any sizable gas discoveries by Unocal likely would be exported to Thailand via Unocal's other existing gas processing complexes in the Gulf of Thailand. (FT)

In Russia, Mobil and Texaco sign a production sharing agreement (PSA) for the Sakhalin III venture. Located offshore Sakhalin Island in Russia's Far East, Sakhalin III is one of three large oil and gas developments being planned by foreign oil companies. In the deal, both companies agree to spend \$150 million in exploration activities over a six year period. Since last year, many foreign oil companies have been waiting for revisions to Russia's new PSA law, which is widely viewed as not offering adequate legal protection for foreign investment in the country's oil and gas sectors. (DJ, PON)

<sup>1/</sup> Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia. In April 1996, Neutral Zone production by both Kuwait and Saudi Arabia totaled about 495 thousand barrels per day.

Notes: •OPEC=Organization of Petroleum Exporting Countries. •Monthly data are often preliminary and also may not average to the annual totals due to rounding.

<sup>1/</sup>Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

<sup>-- =</sup> Not applicable. R=Revised data. E=Estimated. PE=Preliminary estimate. RE=Revised estimate.

Notes: •Monthly data are often preliminary and also may not average to the annual totals due to rounding. See Section 4 for historical series.

<sup>1/</sup> Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia. In April 1996, Neutral Zone production by both Kuwait and Saudi Arabia totaled about 495 thousand barrels per day.

R=Revised data.

Notes: •OPEC=Organization of Petroleum Exporting Countries. See Appendix A for countries in this group.

<sup>•</sup>Monthly data are often preliminary and also may not average to the annual totals due to rounding.

### **Sources for Section 1 (Annual and Monthly Oil Data)**

Crude Oil Production, Natural Gas Liquids Production, Other Liquids, and Refinery Gain

United States: Energy Information Administration (EIA), Petroleum Supply Annual 1995 and Petroleum Supply Monthly, May 1996.

Other Countries: Annual data -- EIA, <u>International Energy Annual</u>, various issues. Monthly data -- Canada -- Maclean Hunter Publishing Company, Oilweek, various issues. Denmark, Mexico, Netherlands, Norway, Germany, and all OPEC countries -- Petroleum and Energy Intelligence Weekly, Inc., <u>Petroleum Intelligence Weekly</u>, various issues. All Other Countries -- PennWell Publishing Company, <u>Oil and Gas Journal</u>, various issues. Refinery Gains: National Petroleum Council, <u>U.S. Petroleum Refinery Study</u>, November 1986.

#### Oil Stocks

United States: EIA, Petroleum Supply Annual 1995 and Petroleum Supply Monthly, May 1996.

Other OECD Countries: • Organization for Economic Cooperation and Development (OECD), <u>Quarterly Oil Statistics and Energy Balances</u>, various issues. • OECD, Monthly Oil Statistics data base, 1985-1996.

#### Oil Demand

United States: EIA, Petroleum Supply Annual 1995 and Petroleum Supply Monthly, May 1996.

Other OECD Countries: • OECD, Quarterly Oil Statistics and Energy Balances, various issues. • OECD, Monthly Oil Statistics data base, 1985-1996.

<sup>1/</sup> The data for Germany are for unified Germany, i.e., the former East Germany and West Germany.

 $<sup>\</sup>overline{2}$ / "Other Europe" consists of Austria, Belgium, Denmark, Finland, Greece, Iceland, Ireland, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and Turkey.

<sup>3/</sup> U.S. geographic coverage is the 50 States and District of Columbia.

 $<sup>\</sup>overline{4}$ / "Other" consists of Australia, New Zealand, and U. S. Territories.

<sup>5/</sup> OPEC=Organization of Petroleum Exporting Countries. See Appendix A for countries in this group.

<sup>6/</sup> The Persian Gulf countries are all members of OPEC, except for Bahrain.

Notes: •Imports include crude oil, natural gas liquids, and refined products, and are on a direct basis. •OECD=Organization for Economic Cooperation and Development. See Appendix A for countries in this group. •Negative numbers represent net exports.
•A dash (-) indicates no trade. •Zeroes (.000) indicate net imports of less than 0.0005 million barrels per day. •See Section 4 for annual data.

1996

<sup>1/</sup> U.S. geographic coverage is the 50 States and District of Columbia.

 $<sup>\</sup>overline{2}$ / "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

<sup>3/</sup> The data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

Notes: •Imports include crude oil, natural gas liquids, and refined products, and are on a direct basis. •OECD=Organization for Economic Cooperation and Development. See Appendix A for countries in this group. •Negative numbers represent net exports. •A dash (-) indicates no trade. •Zeroes (.000) indicate net imports of less than 0.0005 million barrels per day. •See Section 4 for annual data.

<sup>1/</sup> Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1970 through 1989 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia.

P=Preliminary. R=Revised data.

Notes: •OPEC=Organization of Petroleum Exporting Countries.

<sup>1/</sup> Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

<sup>-- =</sup> Not applicable. P=Preliminary. R=Revised data.

<sup>1/</sup> Data through December 1990 are for the former West Germany. Beginning with January 1991, the data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

Note: Oil Stocks - See Explanatory Note 2 in Appendix B.

<sup>2/ &</sup>quot;OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

<sup>3/</sup> U.S. geographic coverage is the 50 States and the District of Columbia. In the United States in January 1975, 1981, and 1983, numerous respondents were added to bulk terminal and pipeline surveys affecting subsequent stocks reported. Using the new basis, the end-of-year U.S. stocks, in million barrels, would have been 1,121 in 1974, 1,425 in 1980, and 1,461 in 1982.

 $<sup>\</sup>underline{4}$ / "Other" consists of Australia, New Zealand, and the U.S. Territories.

 $<sup>\</sup>overline{2}$ / The Persian Gulf countries are all members of OPEC, except for Bahrain.

Notes: •Imports include crude oil, natural gas liquids, and refined products, and are on a direct basis. •"OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom. •Negative numbers represent net exports.
•A dash (-) indicates no trade. •Zeroes (.000) indicate net imports of less than 0.0005 million barrels per day. •Data for 1995 are preliminary.

### **Sources for Section 4 (Historical Oil Data)**

Crude Oil Production, Natural Gas Liquids Production, Other Liquids, and Refinery Gain

United States: • Energy Information Administration (EIA), <u>Petroleum Supply Annual 1995</u>; • Bureau of Mines, Mineral Industry Surveys, <u>Petroleum Statement</u>, <u>Annual</u>, various issues.

Other Countries: • EIA, <u>International Energy Annual</u>, various issues. • EIA, <u>International Petroleum Annual</u>, 1978. • United Nations, <u>Yearbook of World Energy Statistics</u>, 1979. Refinery Gains: National Petroleum Council, <u>U.S. Petroleum Refinery Study</u>, October 1986.

#### Oil Stocks

United States: EIA, Petroleum Supply Annual 1995.

Other OECD Countries: • Organization for Economic Cooperation and Development (OECD), <u>Quarterly Oil Statistics and Energy Balances</u>, various issues. • OECD, Monthly Oil Statistics database, 1980-1995.

#### Oil Demand

United States: EIA, Petroleum Supply Annual 1995.

Other OECD Countries: • OECD, Quarterly Oil Statistics and Energy Balances, various issues. • OECD, Annual Oil Statistics data base, 1970-1979. • OECD, Monthly Oil Statistics database, 1980-1995.

#### Oil Imports

United States: Energy Information Administration (EIA), Petroleum Supply Annual 1995.

Other OECD Countries: • Organization for Economic Cooperation and Development (OECD), <u>Quarterly Oil Statistics and Energy Balances</u>, various issues. • OECD Monthly Oil Statistics database, 1991-1995.

# Appendix A

Organizational and Geographical Definitions

# Appendix A. Organizational and Geographical Definitions

International Energy Agency (IEA) countries are: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

Organization for Economic Cooperation and Development (OECD) countries are: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States. Total OECD includes the United States Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). Total OECD excludes data for Mexico which are not yet available.

**OECD Europe** countries are: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

**Organization of Petroleum Exporting Countries (OPEC)** members are: Algeria, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. As of December 31, 1992, Ecuador withdrew its membership in OPEC. For consistency, Ecuador is excluded in the historical series of OPEC totals.

Arab members of OPEC are: Algeria, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the United Arab Emirates.

Organization of Arab Petroleum Exporting Countries (OAPEC) are: Algeria, Bahrain, Egypt, Iraq, Kuwait, Libya, Neutral Zone, Qatar, Saudi Arabia, Syria, Tunisia, and the United Arab Emirates. In April 1979 Egypt was suspended from OAPEC membership. In May 1989 Egypt rejoined OAPEC. For consistency, Egypt is included in the historical series of the OAPEC totals.

Persian (Arabian) Gulf countries are: Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates.

The term "Former USSR" is being used in the <u>International Petroleum Statistics Report</u> as a purely geographical expression, referring to the Commonwealth of Independent States (CIS), Georgia, and the three Baltic States (Estonia, Latvia, and Lithuania).

Appendix B

Explanatory Notes

# **Appendix B. Explanatory Notes**

#### Note 1: World Oil Supply

Supply includes production of crude oil (including lease condensate), natural gas plant liquids, other hydrogen and hydrocarbons for refinery feedstocks, refinery gain, alcohol, and liquids produced from coal and other sources. Beginning in 1993, U.S. data includes fuel ethanol blended into finished motor gasoline and oxygenate production from merchant MTBE plants.

#### Note 2: Oil Stocks

The International Energy Agency (IEA) assembles and reports total oil stock data for the member countries of the Organization for Economic Cooperation and Development (OECD). Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. In its report titled Quarterly Oil Statistics and Energy Balances of OECD Countries, the IEA defines oil stocks as follows: "All non-military stocks held by importers (including all final consumers directly), refiners, Governments, major non-importing final consumers eligible under IEA/OECD commitments and by foreign entities in the following facilities: bulk terminals, refinery tanks, pipeline tankage, barges, intercoastal tankers (when port of departure and destination are in the reporting country), tankers in port (to the extent that their cargo is to be unloaded in the reporting country), and inland ship bunkers. Oil is reported regardless of the ownership of such storage facilities." IEA data exclude "oil held in pipelines, rail and truck tank cars, sea-going ships' bunkers, service stations, retail stores and tankers at sea." Also the IEA defines the United States to be the 50 States and the District of Columbia, and the U.S. Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). The Energy Information Administration (EIA) does not include the United States Territories in its statistical definition of the United States. Further, the EIA includes oil in oil pipelines as part of its stock data. Tables 1.5, 1.6, 2.3, and 4.4 include oil stocks for the United States according to EIA definitions. Using IEA definitions, at the end of December 1995 United States (including territories) oil stocks totaled 1,422 million barrels.

#### Note 3: A Change to the Oil Balance in Section 2.

Prior to August 1992, Section 2 of the International Petroleum Statistics Report presented a balance of oil supply, demand, and stock change for the Market Economies, at quarterly time intervals. The communist countries, or Centrally Planned Economies (CPEs) were not included in the balance, mainly because good quarterly data for oil demand in these countries were not available. Net imports from the CPEs were included in the balance as part of total Market Economies supply. At present, the former Soviet Union and most of the countries of Eastern Europe are in transition from communism to market economies; because of this there are no longer good political or economic reasons to publish an oil balance only for the countries that have traditionally been market economies. Beginning with the August 1992 edition, Section 2 of the International Petroleum Statistics Report was changed from a Market Economies oil balance to a world oil balance.

The main data issues related to this change may be summarized as follows:

Supply Data. Monthly oil supply data are available for all countries of the world. These data are used to generate Tables 1.1 to 1.4; they were used to expand the Section 2 supply table (Table 2.2) to the whole world.

<u>Demand Data</u>. EIA has now developed quarterly figures for world oil demand, including demand in the former CPEs; these are published in Table 4 of EIA's <u>Short-Term Energy Outlook</u>. The procedures involved in developing quarterly world demand numbers may be summarized as follows:

Complete monthly data are available for the 24 OECD countries. Annual demand data for all countries (about 200 countries) are presented in EIA's <u>International Energy Annual</u>. In 1993, the OECD accounted for about three-fifths of total world demand, the 25 largest consumers outside of the OECD accounted for about one-third of the world total, and the remaining countries (about 150 countries) accounted for less than one-tenth of the total. The key problem, therefore, is to develop good figures for the 25 largest consumers outside the OECD.

Of these 25 countries, by far the largest consumer is Russia, which in 1993 accounted for about one-sixth of the demand in the group of 25. The next largest consumer is China, which in 1993 accounted for about one-seventh of the demand in the group. Thus in 1993 Russia and China accounted for one-third of the demand in the group of 25. For these 2 countries, data are available on oil production and net exports. The demand numbers shown in Section 2 are computed as production minus net exports. This is the same procedure used in the EIA Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other respected publications that deal with international oil markets. Note, however, that this method of computing demand ignores both refinery gain and stock changes.

For other major consuming countries outside of the OECD, quarterly demand data are developed based upon the latest available annual data, analytic judgment about current trends, and some seasonal adjustments. These are the same procedures used for the <a href="Months-Term">Short-Term</a> Energy Outlook

Stocks Data. Reliable stocks data are available for the OECD countries. Estimates of stocks for export and afloat, and of commercial floating stocks, are available. (See sources at the end of Section 2.)

For on-land stocks outside the OECD, there is little reliable data. Most estimates of on-land stocks outside the OECD are based on the theory that stocks are approximately equal to some number of days of demand. Demand figures (which themselves involve some degree of estimation) are then used to compute estimates of stock levels.

In the <u>International Petroleum Statistics Report</u>, it had been the practice for some time to estimate that on-land stocks in the traditional market economies outside of the OECD were equal to 55 days of demand. This was acceptable, mainly because the rule was used only to estimate a relatively small part of total stocks (about 16 percent).

When Section 2 was converted from a Market Economies oil balance to a world oil balance, there were important changes in the conditions that made it reasonable to estimate on-land stocks outside of the OECD using the rule of 55 days of demand. When the CPEs are included, the stocks that must be estimated are a considerably larger part of the total. In 1990, total oil demand in the former CPEs was more than 80 percent as large as demand in all of the non-OECD traditional market economies. Thus the quantity of stocks that would have to be estimated using a 55-day rule would nearly double, and the estimated components of stock levels and stock changes would become relatively large parts of the total. One consequence of this is that the statistical discrepancy (as shown in Table 2.1) would become less useful as an indicator of the overall consistency of the data. The statistical discrepancy is computed from supply, demand, and stock change. If a large part of the stock change is estimated, then the statistical discrepancy loses much of its significance.

As already noted, quarterly demands in the former Soviet Union and in China are computed as production minus net exports. This computation implicitly assumes a zero stock change. Demand in the former Soviet Union is falling. If we were to use a 55-day rule to compute stock levels, falling demand would imply falling stock levels. This would contradict the assumption of zero stock change which was used in computing demand.

In view of all this, the following approach has been adopted. Table 2.3 now shows levels of stocks for the OECD countries, levels of stocks for export and afloat, and levels of commercial floating storage. Stock changes based on these stock levels are shown in Table 2.1. At this time, no other stock levels are shown. Table 2.1 now has a single line labelled "Other Stock Draw and Statistical Discrepancy", which contains the computed values needed to make the table balance.

It may become possible in the future to obtain reliable information on certain categories of on-land stocks outside the OECD. If such data become available, they will be added to Table 2.3, and the corresponding stock change information will be added to Table 2.1.

Changes in Formats and Sign Conventions. There were several changes in Section 2 to make the International Petroleum Statistics Report more consistent with other EIA publications, especially with the Short-Term Energy Outlook. The numbers were changed from 1 decimal place to 2 decimal places. The word "consumption", as used before August 1992, was changed to "demand". The sign convention for stock changes in Table 2.1 was changed. Stock draws are now indicated by positive numbers, and stock additions are indicated by negative numbers. Table 2.1 also uses a new sign convention for the line labelled "Other Stock Draw and Statistical Discrepancy". The values in this line are now computed as Total Demand minus the sum of Total Supply and Total Reported Stock Draw. This is the reverse of the sign convention used before August 1992.

<u>Summary</u>. Section 2 was expanded from a Market Economies oil balance to a world oil balance. Supply data are tracked for all producing countries. Demand data are tracked for the 24 OECD countries, and for 25 large consumers outside of the OECD. Demand for the remaining countries (less than 10 percent of total demand) is estimated, for years that are not yet available in the <u>International Energy Annual</u>. The stock levels in these tables are based on reported data for the OECD and for stocks at sea. The line in Table 2.1 labelled "Other Stock Draw and Statistical Discrepancy" is a balancing item.

Appendix C Glossary

# Appendix C. Glossary

**Alcohol.** The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The molecules in the series vary in chain length and are composed of a hydrocarbon plus a hydroxyl group. Alcohol includes methanol and ethanol.

**Demand (Consumption/Petroleum Products Supplied).** Total petroleum products supplied is the sum of all petroleum products supplied. For each product, the amount supplied is calculated by summing production, crude oil burned directly, imports, and net withdrawals from primary stocks and subtracting exports.

**Crude Oil.** A mixture of hydrocarbons that existed in liquid phase in underground reservoirs and remains liquid at atmospheric pressure after passing through surface-separating facilities. Crude oil production is measured at the wellhead and includes lease condensate.

**Government-Owned Stocks.** Oil stocks owned by the national government and held for national security. In the United States these stocks are known as the Strategic Petroleum Reserve.

**Lease Condensate.** A liquid recovered from natural gas at the well or at small gas/oil separators in the field. Consists primarily of pentanes and heavier hydrocarbons (also called field condensate).

**Natural Gas Plant Liquids.** Products obtained from processing natural gas at natural gas processing plants, including natural gasoline plants, cycling plants, and fractionators. Products obtained include ethane, liquefied petroleum gases, (propanes, butane, propane-butane mixtures, and ethane-propane mixtures), isopentane, natural gasoline, unfractionated streams, plant condensate, and other minor quantities of finished products, such as motor gasoline, special naphthas, jet fuel, kerosene, and distillate fuel oil.

Oil Stocks. Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. See Explanatory Note 2.

**Other Hydrocarbons.** Other materials processed at refineries. Includes coal tar derivatives, hydrogen, gilsonite, and natural gas received by the refinery for reforming into hydrogen.

**Oxygenates.** Any substance which, when added to gasoline, increases the amount of oxygen in that gasoline blend. They include: Fuel Ethanol, Methanol, and MTBE (Methyl tertiary butyl ether).

**Petroleum Products.** Petroleum products are obtained from the processing of crude oil (including lease condensate), natural gas, and other hydrocarbon compounds. Petroleum products include unfinished oils, aviation gasoline, motor gasoline, naphtha-type jet fuel, kerosene-type jet fuel, kerosene, distillate fuel oil, residual fuel oil, ethane, liquefied petroleum gases, petrochemical feedstocks, special naphthas, lubricants, paraffin wax, petroleum coke, asphalt road oil, still gas, and other miscellaneous products.

**Processing Gain.** The amount by which the total volume of refinery output is greater than the volume of input for given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input.

**Processing Loss.** The amount by which the total volume of refinery output is less than the volume of input for given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into products that are, on average, more dense than the input.

Appendix D

Estimation Procedures

### **Appendix D. Estimation Procedures**

Estimation procedures are used for demand numbers in many of the countries outside of the OECD, in cases where data from EIA's International Energy Annual are not yet available. Demand numbers for 1992 and earlier years, for all countries, may be found in EIA's International Energy Annual 1993, published in May 1995, which is the most recent published edition of the International Energy Annual. EIA's WORLD ENERGY database contains final demand data for all countries of the world for 1993, and preliminary demand data for all countries for 1994. Instructions for downloading this database may be found on EIA's home page (http://www.eia.doe.gov/emeu/world/main1.html). The status of the demand numbers shown in Section 2 of this current International Petroleum Statistics Report may be summarized as follows.

The OECD demand numbers are, as usual, based on the latest Quarterly Oil Statistics and Monthly Oil Statistics tapes from the International Energy Agency.

For countries outside of the OECD, the following approach is used. The numbers for 1994 and earlier years match the demand numbers in the WORLD ENERGY database on EIA's home page. Numbers for 1995 forward are the best available EIA estimates, based upon the best annual data currently available, analytic judgment about current trends, and some seasonal adjustments. These are the same numbers that appear in the international oil balance table in EIA's Short-Term Energy Outlook.

The two largest non-OECD oil consumers are the former Soviet Union and China. For these two countries, published data are available on production and net exports. Demand is computed as production minus net exports. This is the same approach used in the Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other major publications dealing with international oil data. Note, however, that because of this computation, the demand numbers for the former Soviet Union and China implicitly exclude stock draw and refinery gain.
